Sabrient Ratings

Sabrient's Buy/Hold/Sell ratings are based on a combination of dynamic filters that determine which attributes of a stock are most predictive in the prevailing market and which stocks best reflect those attributes but are not yet rewarded.

Sabrient starts with an "extraction" process that uses the best performing filters to identify stocks having certain compelling attributes currently sought by the market. Then, a composite scoring process uses a weighted average of several key scores to quantify the relative likelihood of upside or downside price action. As a result, the Buy/Hold/Sell rating may, in certain cases, seem inconsistent with a simple average of the scores cited in this analysis.

A BUY rating means the stock is expected to outperform its relevant benchmark substantially over the next 6 months. A SELL rating means the stock is expected to underperform its relevant benchmark substantially over the next 6 months. A HOLD rating means the stock is expected to perform in line with its relevant benchmark over the next 6 months.

If a stock is rated HOLD, the investor should review the stock's history of Sabrient ratings to see if it has recently changed to HOLD from BUY or SELL. If so, this indicates one of the following: (1) there has been a significant change in the stock's fundamentals, (2) the stock is already appropriately rewarded or punished by the market, or (3) there simply has been some recent price consolidation that warrants attention. A reading of Sabrient's analysis should identify which it is.

About Sabrient

Sabrient Systems is an independent research firm providing statistical analysis of a company's fundamental data to investment professionals. We use a computer-driven, quantitative methodology to identify stocks that appear poised to outperform or underperform the market.

The Sabrient methodology was developed by an experienced research team led by David Brown, a former NASA scientist and retired CEO of Telescan and designer of its premier stock search program, ProSearch. The research team employs a scientific approach to the creation and testing of multi-factor filters. Each filter targets a key area of traditional stock analysis, including value, growth, momentum, fundamentals, earnings, balance sheet, and group strength. Using an adaptive process, filters are continually tested and monitored to ensure that only the best performing filters are at work.

RATING

Sabrient's ratings begin with an extraction process in which each of the few best-performing filters scans the universe of equities to identify stocks having certain compelling attributes sought, but not sufficiently rewarded, by the current market. Then, a composite scoring system employs a broader set of "weighting" filters to rank the extracted stocks. To support individual investors, Sabrient uses the same sophisticated methodology to provide individual stock reports on a universe of approximately 5,600 stocks.

Sabrient regularly tests the performance of its stock selections, using its primary list of published rankings and statistical techniques it believes appropriate. These recommendations have consistently outperformed relevant benchmarks across a broad range of investing styles, market caps, time frames and market conditions, demonstrating the robustness of Sabrient's proprietary methodology. While past performance is no guarantee of future results, Sabrient believes it can maintain its strong performance through its rigorous, scientific approach to filter construction and ongoing backtesting within a dynamic and adaptive composite scoring system.
